

Course Goals and Objectives

Weill Cornell CME activities are intended to lead to better patient care. This conference is intended to familiarize clinicians and students with the assessment of personality disorders. At the conclusion of the course, the participant should be able to:

1. Conduct a clinical assessment for personality disorders.
2. Make a differential diagnosis.
3. Understand the strategies and techniques of different models of treatment and the theory which guides the treatment of personality disorders.
4. Identify and apply the strategies, tactics and techniques of different treatments.
5. Understand the basic concepts of object relations theory and techniques underlying an effective psychotherapy for personality disordered patients.
